

REKS F1

Reks F1 is an extremely early maturing variety and is highly productive. This variety produces round, uniform and dark brown bulbs, it has a uniform fine neck and a relatively good skin quality for its early maturity.

We strongly advise early planting in early soil to assure a rapid and smooth development. To enable stable growth we recommend fertilizing before bulbing. Harvest middle to end of June.

Reks F1 onion sets are heat treated.

TYPE	intermediate
MARKET	fresh
MATURITY	early +++
AVERAGE SIZE	60-88 mm
BULB SHAPE	round
PLANT HABIT	erect
SKIN COLOUR	brown
BREEDER	Takii

“Reks F1 is the earliest marketable onion.”

RELIABLE ONION VARIETIES

EARLINESS AND QUALITY HAND IN HAND

STRONG AGAINST FUSARIUM

THE NEW STANDARD IN ONION SETS

UNIO builds upon an innovative onion breeding program of Takii and the supply and service of Go Products and its producers and distributors. With UNIO, we want to empower our customer's growth by supplying premium quality onion sets, sharing valuable knowledge, and by delivering excellent service.
