

# TAKMARK F1

*Takmark F1 is a very uniform high-quality variety that is early maturing and stable when it comes to yield. An easy grower with strong bolting tolerance and which is strong against Fusarium. It withstands additional nitrogen well to reach a larger size. The shiny brown onion has a fine neck and excellent skin quality that makes fast drying possible and enables short storage. Due to the skin quality of Takmark F1 we especially recommended this variety for packing companies. Takmark F1 onion sets are heat treated.*

“Takmark F1 is easy, stable and uniform.”

TYPE	long day
